90-Day AI Expansion Plan

From one flow to running your business — month by month, with concrete milestones, ROI checkpoints, and graduation criteria. Use this template the day you finish your first flow.

From HitLai Institute — Module S5: “Scaling Up — From One Flow to Running Your Business”

THE PREMISE

Your first AI-assisted flow saved you 5-10 hours a week. Good. That’s not the prize.

The prize is your team of 5 working like 50 — AI handling routine across departments, your team focused on what only humans should do, every department moving at its own pace. The 90-day plan is how you get there without breaking anything along the way.

Three rules: 1. **Expand by data, not by ambition.** Every new flow added is justified by measured value of the previous one. 2. **Respect the trust journey.** Never skip a step on a flow’s setting graduation. 3. **One owner per flow.** Ambiguity is how you end up with 5 half-built flows and 0 working ones.

STARTING POINT — YOUR BASELINE (FILL IN NOW, BEFORE DAY 1)

Line	Your number
A. First flow you built (name it)	____________
B. Hours/week the flow saves your team	______ hrs
C. Trust setting the flow is on today	watches / suggests / approves / handles routine
D. Owner of this flow (one person)	____________
E. Date you turned it on	____________

If C is anything other than “approves” right now, slow down. Most failed expansions trace back to graduating the first flow too fast.

MONTH 1 — RUN ONE WORKFLOW (DAYS 1-30)

Goal: Make flow A unbreakable. Don’t add anything else.

Week	What to do
Week 1	Run flow A every day it triggers. Your team approves every action. Track: how many drafts were good as-is, how many needed edits, how many were wrong.
Week 2	Same. Look for patterns in the edits — they tell you what AI doesn't understand about your business yet.
Week 3	Tune the flow based on what you learned. Update prompts, library entries, thresholds.
Week 4	Measure. Open the ROI worksheet. Hours saved × your team's hourly cost. Subtract the subscription. That's your real number.

End-of-month checkpoint (be honest):

☐ Hours saved/week (measured): ______ hrs ☐ % of AI drafts that needed no edits: ______ % ☐ Number of AI mistakes your team caught: ______ ☐ Net ROI this month (hours × cost – subscription): $______

Graduate to Month 2 only if: - Hours saved is at least 5/week - % of clean drafts is at least 70% - Your team trusts the flow

If any of those are missing, **stay in Month 1**. Don't expand. Tune flow A until it's solid.

MONTH 2 — ADD TWO MORE FLOWS (DAYS 31-60)

Goal: Cross-department coverage. Pick flows that touch different teams so the load is distributed.

Pick your next two flows

Use this rubric. Score each candidate flow 1-5 on each dimension.

Candidate flow	Hours saved/wk	Risk level	System overlap with flow A	Owner ready	Total

Pick the two highest-total scores. Lower risk + higher hours-saved + already-using-the-system = fastest payback.

Common Month 2 picks

If your first flow was…	Good Month 2 picks
Proposal generation (S1)	Customer FAQ response (S2), Weekly status report (S3)
Customer response (S2)	Invoice intake (S3), Lead research (S1)
Invoice processing (S3)	Customer onboarding doc collection (S3), Vendor reorder alerts (Ops)

Month 2 rules

- **Each new flow starts at “AI acts, you approve.”** No exceptions, no matter how confident you are.
- **One owner per flow.** Same person can own multiple, but each flow has exactly one.
- **Flow A keeps running.** Don’t pause it to focus on the new ones.
- **End-of-month measurement** for all 3 flows.

End-of-month checkpoint:

☐ Total hours saved/week across 3 flows: ______ hrs ☐ All flows still on “approves” (recommended) or graduated to “handles routine” with proof: yes / no ☐ Any flow you should DEMOTE? List: ____________

MONTH 3 — DEPARTMENT-LEVEL AUTOMATION (DAYS 61-90)

Goal: A whole department’s routine work moves through AI + your team + your systems together.

Pick your “deep” department

Look at where your 3 flows already concentrate. That’s your department.

If your flows are…	Your deep department this month is…
Proposal + customer response + lead research	Sales
Invoice + receipt + report	Finance / Ops
Customer response + onboarding + FAQ	Support

What “department-level” means

5-7 flows in the same department, AI + your team coordinated across all of them. Your team’s daily work in that department changes:

- Time spent on routine drafting / data entry / chasing: way down
- Time spent reviewing AI’s work: a measurable but lower number
- Time spent on what only humans should do (relationships, exceptions, strategy): up

Add 4-5 more flows in the deep department

Same rules as Month 2 — start at “AI acts, you approve,” one owner per flow, baseline measurement before adding the next.

First trust-journey graduations

By end of Month 3, some flows have been right enough times that they qualify to graduate from “approves” to “handles routine.”

Graduation criteria (from S4 Trust Checklist): - Right at least 20 times in a row, with your team’s approval each time - Recoverable mistake (under 1 hour to fix if wrong) - Not legally binding or regulated - Owner agrees to graduate - Setting demotion is one click away if anything goes wrong

End-of-Month-3 checkpoint:

☐ Total flows running: ______ ☐ Total hours saved/week: ______ hrs ☐ Department coverage (which department is now deeply automated): ____________ ☐ Flows graduated to “AI handles routine”: ______ ☐ Net monthly ROI: $______ ☐ Subscription tier review — do you need to upgrade based on usage? yes / no

DAY 90 — THE THREE QUESTIONS

Sit down with your team. Answer honestly.

1. **What changed?** What does someone’s day look like now vs. 90 days ago? Be specific. Names, hours, conversations they’re not having anymore because AI handles it.
2. **What broke?** Where did AI get something wrong, and how quickly was it caught? If you can’t think of an example, you may not have enough volume yet — or your team isn’t reviewing closely enough.
3. **What’s next?** Looking at the deep department: what’s the next department to bring under AI + team coordination? Same playbook starts on Day 91.

THE EXPANSION MAP — AFTER DAY 90

Each subsequent quarter, repeat the pattern: pick the next-highest-value department, run the 90-day playbook, graduate flows by data not vibes.

Year-1 reasonable target for an SMB: - 3 departments running with AI + team coordination - 15-20 flows total - 25-40% of routine work handled by AI on “handles routine,” the rest on “you approve” - 30-50% of your team’s time recovered for higher-value work

What this is NOT: - A staff-reduction plan. Most SMBs running this playbook keep their team and grow output. The team that was “5 doing the work of 5” becomes “5 doing the work of 50.” That’s the prize. - A rip-and-replace. AI runs *with* the systems you already use — not instead of them. CRM, email, accounting, calendar, the AI you already chose — all of it stays.

THE WEEKLY RHYTHM (PERMANENT)

Monday morning, 15 minutes: 1. What did each flow do last week? (Use the audit log.) 2. Any errors? Demote anything? 3. Any flow with 20+ right-in-a-row? Graduate? 4. What’s the highest-value next flow we haven’t built?

That’s the rhythm that turns one flow into a coordinated AI organization, one quarter at a time.

THE HITLAI ANSWER, IN ONE LINE

> AI tools, your team, your systems — running together, safely.

The 90-day plan is built into the platform — flows, owners, trust settings, audit log, weekly review, ROI dashboard. Each part of your business moves at its own pace. Works with what you've got — Microsoft 365, your CRM, your accounting, the AI you already use. What we don't have a connector for, the platform builds automatically in minutes, reviewed before it goes live. Every step auditable.

Want to fill in this plan with your real numbers, on your laptop, with the HitLai Institute team in the room? That's Module S5. Bring your first 30-day data. → **hitlai.net/institute**
